# The EED recast. Higher ambitions - and challenges

- MS are working hard to find the best ways for their national implementations
- The new directive represent quite a step up in commitment and complexity. A just implementation will be costly for MS.
- More government regulation. Less market.
- It requires new ways of thinking to find the most cost-effective solutions.
- How do we solve this in the most optimal with the short deadlines ahead of us?

# Timeline for the national process (EED)

# Status on the implementation

The EE First principle

Energy poverty

Qualification and education requirements

Financing

The energy savings obligation

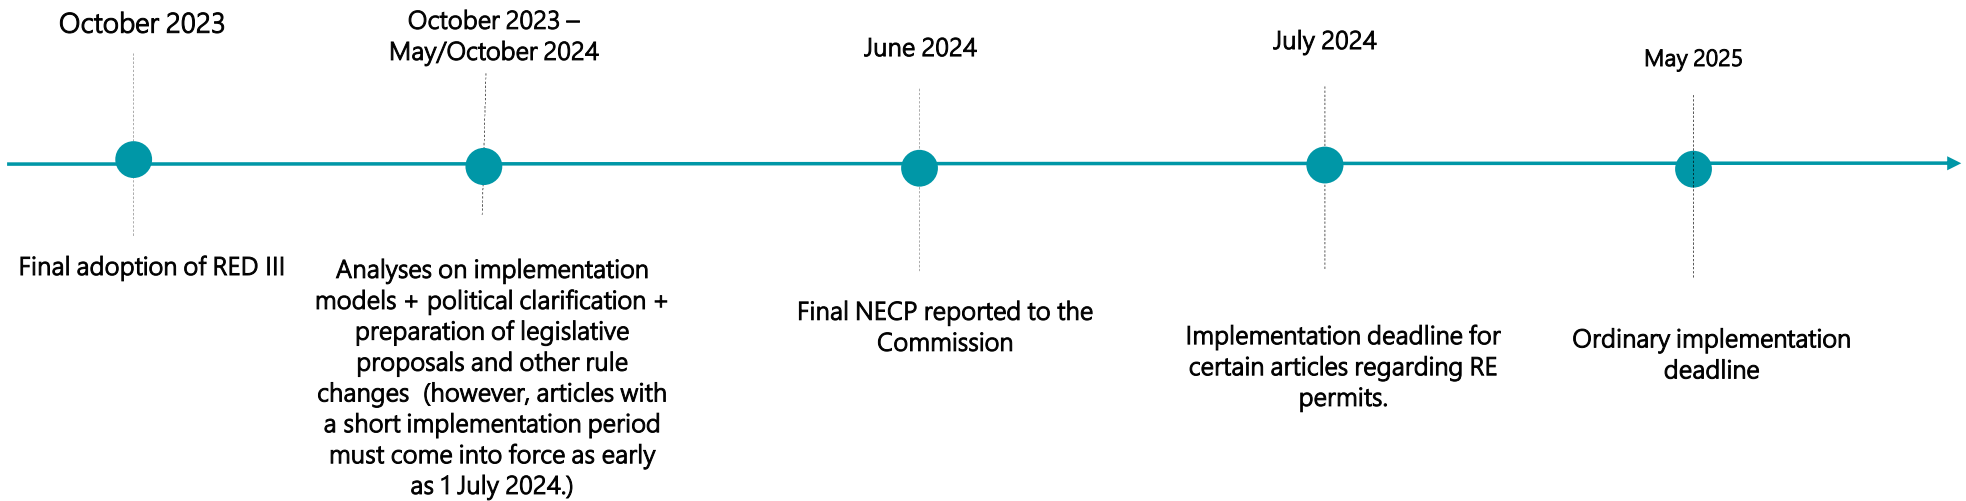

The public sector

# The RED-II revised directive (RED III)

- The directive affects areas of great political attention in Denmark:
  - › faster expansion of RE,
  - › sustainable use of biomass
  - › green transport sector.
- The wide focus on the expansion of renewable energy across sectors require close inter-ministerial dialogue.
- Despite dispute over speed, Denmark is on the right track for 2030 in terms of both the general RE-share target and the individual RE-share-sector targets.

# Timeline for the national process (REDIII)

# Relation to NECP

## EED

- Increase amount of reporting obligations on energy efficiency
- Comprehensive administrative work for member states to keep track on reporting obligations across EED, EPBD and the Governance regulation
- **Timing issues:** Challenging to report on a whole new set of measures in the NECP already by June 2024 – when implementation hasn't been decided yet.
- Interlinkages between the EED and the EPBD requires more time.

## RED III

- NECP-reporting obligations for almost all main tracks in the directive (RE-permitting, RE in industry, RE in buildings, overall RE-target, RE in heating, sustainable biomass etc.)
- **Timing issues** (Even more pressured than EED): Challenging to report on a whole new set of measures in the NECP already by June 2024
- In addition to the NECP, there are complex provisions on RE permits with a very short implementation deadline - July 1, 2024 – (the directive was published on October 31, 2023).

Thank you
